

Tour Report South Africa's Rare Mammals and Birds 7 – 19 September 2025

Aardvark

Aardwolf

Blue korhaan

Brown hyena

Compiled by Rob Mileto

Sunday/Monday 7 & 8 September 2025

Day 1 and 2:

London Heathrow to New Holme Nature Lodge in the Khoisan Karoo Conservancy

It was very busy at Terminal 5 so not quite all of us met up on our uneventful overnight flight to Johannesburg. We did, though, manage to catch up with each other before our domestic flight to Bloemfontein. The walk to the terminal building there gave us our first South African Bird and Mammal; a little swift and a South African ground squirrel, respectively. In the small arrivals lounge, we met Michael Wright, the co-leader and a trip guest who had been travelling elsewhere.

We then headed off south-westwards towards our first destination – the Khoisan Karoo Conservancy. The grazing lands were not hugely wildlife rich, and at 110 km per hour it was difficult to spot much, but we did manage to pick up a lovely pair of blue cranes, as well as more mundane species such as pied crow, laughing dove and Egyptian goose.

A short comfort stop produced pied starling (an endemic), speckled pigeon and southern masked weaver. Unseasonably, for much of the rest of the journey, the heavens opened and we were treated to some serious rain, thunder and lightning. We did arrive in the dry to our camp, the New Holme Nature Lodge and were welcomed by a distant Ludwig's bustard and a much closer long-billed lark and double-banded courser... and of course the Lodge owner, "PC".

A hearty dinner was followed by the first of many night drives where we picked up a fair few nocturnal mammals, including a bat-eared fox, a genet (probably small spotted) and the comical spring hare, bouncing through the short vegetation like some giant gerbil. Into the bargain, we had excellent views of a cape porcupine and another Ludwig's bustard.

Tired but happy, we finally got to have a long sleep in a proper bed.

Bat-eared fox

Tuesday 9 September 2025

Day 3:

Khoisan Karoo Conservancy

As we were sleep deprived, we had a lie-in until ... ooh 8:00 before breakfast! It was then off into the wilds to see what we could find. Conversely, the blue korhaan sported much light blue plumage, as the name suggests. Equally, the northern black korhaan was boldly marked in black. One male kindly put on a display - throwing itself into the air and hovering there, legs dangling before dropping back to the ground.

Northern black korhaan

Other top spots included rufous-eared warbler and an all too fleeting Karoo scrub robin. For the LBJ lovers, there were spike-heeled, red-capped and eastern clapper larks.

In wetter areas by the dam (or reservoir as we know it) were the likes of South African shelduck, yellow-billed duck, and wood sandpiper. A little bittern also made a welcome appearance.

Mammals were rather thin on the ground. There was a distant meerkat standing sentinel, a lovely herd of African buffalo, and a rather startled common warthog. It was also good to see more South African ground squirrels and some steenbok.

We were back at the lodge for a light lunch and then a little siesta before high tea with the trip checklist.

It was a yellow mongoose, late afternoon, with at least eight of these smart little beasts seen within about 20 minutes. Blue korhaan also afforded excellent views. Our main target of the afternoon were petroglyphs, ancient rock carvings of elephant, hippo and various antelope etched into granite boulders. Amongst these boulders were also glimpsed rock hyrax and the unfeasibly agile eastern rock sengi, darting almost between boulders almost too fast for the eye to follow.

We enjoyed sundowners and crisps while watching a distant electrical storm. During the drive back to the lodge, we stumbled across our first aardwolf in the spotlight, what a treat! This mainly insect-eating member of the hyena family sports a soft yellowish coat lined with a few vertical black stripes.

After dinner, we went out again to see what we could find in the darkness. The full moon was rising orange in the clear sky. We were soon seeing plenty of bouncy spring hares, a few scrub hares and a solitary and

confiding cape hare. Top spot for some was another aardwolf, which allowed us a close approach before trotting off calmly, spraying territorially as it went. We got back just before the following day!

Wednesday 10 September 2025

Day 4:

Khoisan Karoo Conservancy

We had a lateish start because of the long night out the previous day. It was bright and sunny and the Karoo was studded with yellows, purples and reds of cape tulip, false African violet and pink dollsrose, respectively.

South African ground squirrels scuttled amongst the small shrubs, occasionally standing sentinel and so making for excellent photo opportunities. There were the usual collection of larks, with red-capped showing particularly well. However, these were eclipsed by a stately party of some 20 blue cranes, some leaping up in display before they all gently spread their wings into the wind and lifted essentially as one into the cloudless sky. A little further on, a gorgeous sable antelope strode majestically within a few metres of our van, followed, as if in waiting, by two surf-like sub-adults.

Sable

Lunch was enjoyed back at the lodge, followed by some downtime before checklists with tea and a stroll around the camp. The greenery held a different suite of birds including African hoopoe, Cape robin chat, lesser swamp warbler and a boldly marked fiscal flycatcher.

We then hopped aboard the van to enjoy a 'bush braai' down on the dam (reservoir) edge. The sunset was drunk in along with our preferred tippie. Into the bargain, we had a fly past by a Ludwig's bustard.

01962 302086 sales@wildlifeworldwide.com www.wildlifeworldwide.com

The night was not over. After a quick comfort stop, we were back out, spotlighting the creatures of the night. Aardvark! Finally, after two nights of failure, there the little darling was, shambling along, affording decent views before it disappeared over a ridge. Hurray! This was a first for many of us, but thankfully, closely followed by a second equally pleasing sighting of the 'vark'.

We really should mention that we also saw at least five aardwolves and a short but very satisfying view of a cape fox.

We were back just after 10 pm in preparation for an early following morning.

Blue crane

Thursday 11 September 2025

Day 5:

Khoisan Karoo Conservancy to Marrick Private Game Reserve

6.30 am saw us swigging hot drinks and enjoying freshly baked muffins.

It was then off to catch meerkats warming themselves in the early morning sun. Although they took a little finding, we were not disappointed. One, two and eventually up to six individuals, including an unbelievably cute pup, stood praying at the sunrise. Simple.

Back at camp, we polished off a full breakfast before some headed out to the dam wall in search of the small but perfectly formed, near-endemic Namaqua warbler. This showed all too briefly, but long enough to see its rather undistinguished markings. Other birds of the morning included African spoonbill, pearl-breasted

Find out more about our [South Africa's Rare Mammals and Birds](#) trip or [contact us](#)

01962 302086 sales@wildlifeworldwide.com www.wildlifeworldwide.com

swallow, drumming African snipe and a flyover by a massive martial eagle, being mobbed by some very brave pied crows.

Around mid-morning, we said our goodbyes to the camp staff and headed north. There were some secretary birds and weird-looking black wildebeest on the way, but too distant to make out what odd looks they sported. Also seen during the morning were a pale chanting goshawk and a glimpsed African stonechat.

We had lunch in Oriana. From there, the number of large roadside private game reserves increased. Hence, we managed to see a large range of large mammals including eland, oryx, bleisbok, blue wildebeest and the ever gorgeous (greater) kudu.

We were greeted on arrival by Mike, the son of the owners of Marrick Reserve. Ensneced, we had dinner and then it was off out again for a night drive. We were soon seeing the usual cape, scrub and the ever-entertaining spring hares (which are actually rodents, unlike true hares). Perhaps the more desirable aardwolf put in several appearances, as did bat-eared foxes. However, top spots for some were perhaps a striped polecat that trundled down the track ahead of us, and/or the brown hyena that loloped across the grassland. For others, the spotted eagle-owl showed well. An honourable mention should be made to the western barn owls, who also put in a welcome showing.

Striped polecat

Friday 12 September 2025

Day 6:

Near Kimberley and Marrick Private Game Reserve

Given the late night, it was breakfast at 8:00 am and then off to the wetlands near the Wildebeest Kuil Rock Art Centre.

However, even before we had left the lodge access road, there were birds aplenty, including Marico flycatcher, piping cisticola, black-cheeked waxbill, red-headed finch and a fleeting swallow-tailed bee-eater. However, the most striking was surely the crimson-breasted shrike. It sports what it says 'on the tin'.

The wetlands themselves were awash with southern pochard and both lesser and greater flamingo, sadly at some distance. Also present, but in smaller numbers, were ruff, black-winged stilt, whiskered tern, yellow-billed duck and cape teal. A rather surprising but pleasing find was an Allen's gallinule lurking in tall swamp grass.

Having had our fill of waterbirds, we went to a shopping mall for the following day's lunch items and also to get our own food fill of the day's lunch.

Back at camp, we had a siesta for the hottest part of the day before checklists with tea at around 4 pm.

Some then went for a stroll and were rewarded with chestnut-vented warbler, familiar chat, greater spotted and red-chested swallows, a restless fairy flycatcher and an obliging golden-tailed woodpecker. Dinner was followed by a night drive with all of the 'usuals' seen along with another cracking brown hyena, rufous-cheeked nightjar and, for some, another lovely aardvark.

Saturday 13 September 2025

Day 7:

Mokala National Park and Marrick Private Game Reserve

We left at a rather bleary-eyed 6.30 am. We were headed for Mokala National Park and saw the likes of African buffalo on the way.

At the park gate, there were greater striped swallows and fiscal flycatcher. Entrance formalities over, we were soon seeing tsessebe, blue wildebeest, plains zebra, springbok and oryx.

It was not long before we were at Lilydale camp, enjoying not only our packed breakfasts, but also the view out over the Riet River. African darters and reed cormorants patrolled the waters, rock martins and white-rumped swifts the air and ashy tit and chestnut-vented warbler the thorny bushes.

Post breakfast, a little stroll around the grounds added yellow canary, Kalahari scrub robin and chestnut-vented warbler to the day list.

We then slowly drove to a hide by the Stofdam waterhole. En route, there were more and closer tsessebe, oryx, some graceful roan, as well as ostrich, some with fluffy chicks. We nearly ran over a Burchell's sandgrouse! This scuttled a short distance off the road rather than flying off.

At the waterhole hide itself were a whole host of small birds drinking at the water inlet. Red-billed firefinch was the most numerous, but there were also good numbers of the gorgeous violet-eared waxbill and equally stunning green-winged pytilia. Blue waxbill added a splash of sky blue and cape starling shone metallic electric blue in the morning sunlight. It was a photographer's dream.

We enjoyed a picnic lunch at another rest camp with fiscal flycatcher. Sadly, it was then time to leave the national park, the drive to the gate providing a rather splendid nearby oryx.

Find out more about our [South Africa's Rare Mammals and Birds](#) trip or [contact us](#)

01962 302086 sales@wildlifeworldwide.com www.wildlifeworldwide.com

After a short siesta at the lodge, we headed off to a 'koppi' (rocky outcrop) on the neighbouring property in search of Eastern rock sengi. The short drive there included views of African buffalo, our first impala and some copper springbok, a colour variant of springbok. Stepping out of the vans and climbing a short distance into the rocks, many saw a sengi almost immediately. However, in typical sengi fashion, it darted around so quickly it was barely visible. We persevered and our two expert local guides fairly soon found another sat enjoying the late afternoon sunshine. This little dear sat still for quite some minutes, affording excellent views and photo opportunities.

Dinner was followed by the final night drive at Marrick. We were again treated to excellent sightings of aardwolf, bat-eared fox, spring hare and black-backed jackal. As an added treat, some saw a spotted eagle owl and a distant African wild cat... or a very wild cat looking feral cat...

Sunday 14 September 2025

Day 8:

Marrick Private Game Reserve to Vryberg

Breakfast was at 8 am, followed by a little walk around the camp to get up close and personal with some South African ground squirrels.

We then bade farewell to the camp staff but headed off into the reserve itself. This was the first time we had seen the grassy plains in the daylight. It was dotted with herds of springbok, bleisbok and black wildebeest. They proved skittish, so it proved hard to get close, but it was impressive to see springbok sprinting at full speed and occasionally leaping high or 'hopping', stiff-legged, a behaviour known as pronking. On the bird front, the star of the show was undoubtedly a pair of Burchell's coursers, which watched us watching them from a reasonably close distance.

Once we left the reserve, there was relatively little to see. Some picked up black-winged kite, western cattle egret and ostrich.

We arrived in Vryberg, our overnight stop, in time for a late lunch. From there, it was only a short drive to our guesthouse overlooking a waterhole that sat just inside the adjacent Leon Taljaard Nature Reserve. This had a few visiting birds like helmeted guineafowl, laughing dove and speckled pigeon.

The plan was to catch up on the checklist at 6.15 pm, looking out over the waterhole, just in case anything interesting came over to drink. We could never have guessed that a huge white rhinoceros would be waiting for us, right by the electric fence that was the only thing that separated it from the veranda we stood on. It happily munched on some pellets the guest house owner threw out for it, before slowly toddling off in the direction it had come from. What a treat!

Once it had disappeared out of sight, we polished off the checklist and headed out to dinner.

Monday 15 September 2025

Day 9:

Vryberg to Madikwe Game Reserve

There was no rhino with breakfast, but it was good to see impala, springbok and, on the bird front, red-faced mousebird and many helmeted guineafowl.

We hit the road north at about 8.30 pm, and roadside spots included grey goawaybird, yellow-billed hornbill and a pair of perched and wonderful white-backed vultures.

Lunch was al fresco in a flowery garden and in the company of white-bellied sunbird and Karoo thrush.

Find out more about our [South Africa's Rare Mammals and Birds](#) trip or [contact us](#)

01962 302086 sales@wildlifeworldwide.com www.wildlifeworldwide.com

From there, it was only a modest drive to Madikwe Game Reserve and the lovely Matla Game Lodge.

We had high tea, checklist and elephants at the lodge waterhole at 3.30 pm. Off we then went on the late afternoon game drive. Only a short time into it, we were offered a target animal if we drove fast and ignored all other sightings, which could be caught up on another day. Hence, we drove past at least three white rhinos! About an hour later, there he was, a resplendent male cheetah, belly full of impala, the remains of which were scattered around him. He was totally relaxed in the presence of our van and even stood and walked past us to get to a preferred resting spot.

Cheetah

We celebrated with sundowners and snacks, accompanied by the almost diesel engine song of rufous-naped nightjar and a fly past of Burchell's sandgrouse.

One of the group had a birthday, so we celebrated at dinner with red wine and cake.

Tuesday 16 September 2025

Day 10:

Madikwe Game Reserve

It was a 6:00 a.m. start, and soon into it, we received information of a lion kill with 8-month-old cubs. These we found still feasting on the remains of the unfortunate ungulate. The male had already eaten his fill and was sleeping, so he didn't really provide any photographic opportunities.

Not too far away, another lion kill was reported, so we headed off there to enjoy unbelievably cute eight-week-old cubs. These were mewling for the mother and eventually followed her, nose to tail, into the long grass.

The male was again absent, but seemed to have wandered off in the direction of a nearby waterhole. Hence, we popped up to that to find him on a slightly raised mound for all the world looking like Mufasa, The Lion King himself, mane blazing in the early morning light.

In theory, we then had a difficult decision: breakfast or the chance of wild dogs? No contest! Off we went to the other side of the reserve. There they were, sprawled out under some shady trees, fat bellies clearly indicating they had eaten well recently. Occasionally, one would raise a head or stand and take a look at us, but otherwise these painted beauties seemed intent on having a long siesta. So we too returned to camp, had a large brunch and our own long siesta (via a very smart yellow-throated sandgrouse).

Wild dog

At 3:30 pm, it was the checklist, high tea and elephants drinking at the waterhole.

Tea and cake eaten, we headed off into the bush. As well as the usual impala, blue wildebeest and zebra, a foursome of African buffalo bulls proved entertaining, with one individual trying to stare us down, as we watched from not so far.

Top spot probably goes to a pair of white rhino bulls that were ambling through the savannah right next to the track. We got excellent views, but thought we would push our luck and park on the track ahead of them and have them come to us. Probably because we were now upwind, they were rather cautious. Eventually, though, they seemed to have decided we seemed harmless, giving us a fine walk past to the click, click, click of cameras gone wild.

It was by then time for sundowners, this time with a spotted hyena walking past and another closer one by spotlight later.

Wednesday 17 September 2025

Day 11:

Madikwe Game Reserve

Another 6:00 am start and after a quick hot drink, off into the sunrise we went.

Almost immediately, intel came over the radio about something worth seeing. Can you believe it? We sped past more rhinos! Soon we were 'in the queue' for the mystery mammal, so we had coffee.

Luckily, the queue (which is in place so as not to crowd the animals with vehicles) disbanded when the wild dog pack (for that was then revealed as the mystery animal), having finished an impala breakfast, were on the move!

We soon caught up with them, and it was exhilarating to drive parallel to them as they trotted along next to our vehicle. Lazarus, our driver guide, correctly surmised that they were heading to a nearby waterhole to slake their thirst. So we drove ahead and parked, such that they would have to walk past us to get to the water. This they duly and stunningly did. The sight of over a dozen wild dogs lined up and lapping at the water's edge will no doubt stay in our memories for a very long time.

Wild dog (by Robert Mileto)

When they headed off into the thick bush, we headed back. However, the morning's wildlife entertainment was not over. As we rounded a corner, a small grey lump on the right of the track turned out to be a sleeping elephant calf, with the rest of the herd on the left of the track. The snoozing calf was awakened as we passed and was so startled, it let out the most amazing, loud and frankly rather heart-rending scream, closely followed by an equivalent scream from what was probably its mother. Never come between a mother

Find out more about our [South Africa's Rare Mammals and Birds](#) trip or [contact us](#)

01962 302086 sales@wildlifeworldwide.com www.wildlifeworldwide.com

elephant and her calf if you don't want to be seriously damaged or worse... so we sped ahead out of harm's way.

Not much further on, we approached an amazing geological formation, where it seemed, to the untrained eye at least, as if, in ages past, hot lava had spilt over a softer rock. Over millennia, the softer rock had, perhaps, eroded, leaving a myriad of intricate fluting and caves, large and small. In one of these caves flicked the ears of a brown hyena flicked! It was very tricky to spot them, but then serendipitously, a second brown hyena popped out of the far end of what was now clearly a double-ended tunnel rather than a cave. It gave us a quick view of itself before disappearing back into the darkness. What a morning! Polished off with a lovely brunch back at camp, thence a siesta.

It was, of course, high tea at 3:30 pm, with the checklist and a lone bull elephant at the waterhole. Out on the reserve, for the mammal watchers and photographers amongst us, we spent perhaps too long trying to work out what a perched pipit was. After some deliberation, we settled on Buffy. More entertaining for all of us was a red-crested korhaan chasing down a fat, juicy locust, but frequently failing to pin it down. Consequently, we had the amusing spectacle of locust leaping and korhaan chasing for a goodly while, before the chaser finally caught and ate the chasee.

However, these were effectively distractions from the main goal of the afternoon. That was the brown hyena den we had visited that morning. On arrival, we spotted an adult running off into the bush and we thought our efforts at that den would be wasted, but we pressed on. Thankfully, our perseverance was handsomely rewarded by the cutest hyena cub you have ever seen! It wandered around the entrance for a while before plopping down and looking over at us with its deep, dark eyes.

We just had time to sneak in sundowners with a spotted eagle owl beautifully silhouetted against an orange/pink sunset. The spotlit drive back to the lodge picked up a lovely spotted hyena.

Dinner was an al fresco braai, beneath a starlit sky and a bright Milky Way arching through it. Joining us initially at the adjacent waterhole was a big bull elephant, but he was soon driven off by a pair of white rhinos.

One group member gave his thanks and farewells since they were departing for Botswana very early the following morning. Then, delicious malva pudding finished, we all headed off for our final sleep in South Africa.

Thursday/Friday 18 & 19 September 2025

Day 12:

Madikwe Game Reserve to London Heathrow

Sadly, it was our last safari of the trip. Hot drink downed, the savannah was again alive with zebra, impala, wildebeest and even the odd white rhino. We soon received our mission for the morning, which turned out to be another lion kill. On arrival, there were many lions but not much left of an unfortunate zebra.

Having eaten their fill and provided many photo opportunities, some of the pride, including both large males, headed off to drink. We followed and watched their presence cause consternation amongst the hoofed animals, who stood staring at them to ensure they passed by rather than sneaked up. Lazarus placed the vehicle between them and the water, giving us great up-close views as they walked around us and down to the cooling drink.

At the far end of the same waterhole were three white rhinos. They jostled amongst themselves, but since we and the lions were downwind, they were blissfully unaware of our presence.

More white rhinos were spotted on our drive back to the lodge, making a rather incredible total of 13 of those stocky beasts seen in just a few hours.

Find out more about our [South Africa's Rare Mammals and Birds](#) trip or [contact us](#)

01962 302086 sales@wildlifeworldwide.com www.wildlifeworldwide.com

We had a final lovely lodge breakfast, bade our farewell to the lovely staff and headed off to Johannesburg airport. On tarmac roads, speed prevented much wildlife viewing, but it was good to add hamerkop to our trip list.

All too soon, we were back at O.R. Tambo Airport in Jo'berg and saying goodbyes to two group members who were off to enjoy the delights of Cape Town. It was also time to say farewell to Michael, our excellent driver and co-leader. And so just four of us boarded the overnight flight to London. Blearily eyed, we said our farewells in the baggage hall and, heads full of cherished memories of scarce and secretive mammals, we headed off home.

Images by Debbie Stewart unless otherwise stated.
