

## Tour Report The Unknown Adriatic 5 – 13 April 2025

Three-toed woodpecker

Eastern black-eared wheatear

Pink butterfly orchid

Durmitor Mountains

Compiled by Attila Steiner

We had another great holiday in Montenegro and Albania filled with good birds, orchids, amazing landscapes and delicious food. Highlights included wonderful views of Eurasian three-toed woodpeckers, several rock partridges, Dalmatian pelicans, greater flamingos, and horned and pink butterfly orchids.

## Saturday 5 April 2025

### Day 1:

Arrival day, birding around Mlini

*Weather: Sunny, slight breeze*

Two guests arrived at Dubrovnik Airport in the morning. Shortly after picking them up we stopped along the coast and started birding along a dirt track meandering down towards the sea. We found several Sardinian and Eastern subalpine warblers singing. Scanning the bay below us was a group of black-winged stilts resting on a rock near the shore. A Eurasian sparrowhawk flew past and was mobbed by barn and red-rumped swallows. An Eastern black-eared wheatear perched on the wire, so we had good looks through the scope. Butterflies were active with several orange tips, wall browns seen and even a lesser emperor dragonfly was on the wing. We then drove to our lovely hotel on the coast in the small town of Mlini.

We had lunch on the terrace of the hotel seeing a migrating western marsh harrier and another Eurasian sparrowhawk. After lunch, we drove to Dubrovnik and stopped at a lookout offering a picturesque view of the old city, castle walls and the bay.

Then we drove past the airport to Cadmos Marsh, an area of pastures, abandoned vineyards, wet meadows and marshland. As we started walking we saw several circler buntings giving good views in the scope. A corn bunting was singing atop a small bush and soon it was joined by a lovely male Spanish sparrow. Walking along the stream we flushed four green and one wood sandpipers and three garganeys were enjoyed in a nearby wet area. Several hoopoes were flying around us and landing on the path offering great views. Many butterflies were flying: Camberwell beauty, holly blue, nettle-tree butterfly, painted lady and clouded yellow added to the list.

Getting nearer to the marsh we heard a Eurasian bittern booming and then saw two birds in flight over the marsh. A purple heron was stalking in the reeds, and we managed to lure in a skulking Cetti's warbler with some patience. Water rail was calling from the dense sedges and many barn swallows and sand martins were flying overhead. A little ringed plover was flushed and then it landed, so we could see its yellow eyering. On the walk back a northern wheatear was spotted in the distance and a common nightingale started singing close to the van. It was then time to return to the hotel for dinner.

## Sunday 6 April 2025

### Day 2:

Travel to Montenegro, Kotor Bay, Rijeka Crnojevica

*Weather: Raining all day, snow in the mountains*

The weather changed overnight and it was drizzling in the morning. Some of us still opted for a pre-breakfast walk. We saw a singing blue rock thrush perched atop a tall cypress. A Eurasian wryneck was heard, but we couldn't find it. Two hawfinches were also seen close to the hotel along with many greenfinches.

After breakfast, we left for Montenegro in heavy rain. Crossing the border was quick and easy. We were driving along scenic Kotor Bay in the rain eventually stopping to scan the water for birds. At one of the stops, we found a Mediterranean shag. A poor grey heron was seen trapped in the nets above a fish tank. Reaching the town of Kotor we spotted Alpine choughs flying and landing on the roofs. A quick stop gave good views of these social birds. Then we started ascending the hairpin bend road above Kotor. The scenery was beautiful with Kotor Bay below us and snow-capped mountains all around. The wind was very strong, which made our photo stops an adventure. As we were nearing the top it started snowing.

We had a nice lunch of traditional cured ham and cheese on the Plateau in a small restaurant. The fireplace was warm and it was very cosy inside, still, we had to move on as it was snowing heavily. We drove across Lovcen National Park on the snow-covered road and reached Cetinje, the former capital of Montenegro. From there we started descending into the beautiful Rijeka Crnojevica valley. It was raining here, but we made frequent stops for orchids growing on the roadside. Horned, early spider, sparse-flowered and green-winged orchids were admired along with *Fritillaria messanensis*. There were birds around as well with several nice Eastern black-throated wheatears, ciril buntings and hawfinchs along the road. We stopped at the old bridge of Rijeka Crnojevica and saw little egret and Eurasian moorhen. We reached the aptly named Hotel Pelikan at Lake Skadarsko in the afternoon and checked in.

**Monday 7 April 2025**

**Day 3:**

The southern shore of Lake Skadar

*Weather: Sunny, cold, strong wind in the afternoon*

We woke up to a very cold morning, but the rain had fortunately stopped. We did a pre-breakfast walk around the village. Pygmy cormorants, little egrets, great crested and little grebes were seen on the lake. A nice male woodchat shrike was found perched on the castle hill and a common cuckoo was also seen in the scope. Red-rumped swallows were resting on the wire with barn swallows on the way back to the hotel.

After breakfast, we started driving along the southern shore of the lake. We had several short stops for flowers and views of the lake until we reached a scenic parking lot. The views over the lake and snow-capped mountains in Albania were spectacular. There was a nice array of birds found around us. A blue rock thrush was singing, and several western rock nuthatches were uttering their characteristic and loud call from atop a bush or a rock. A nice short-toed eagle flew past above the ridge and crag martins were joining other hirundines. A big flock of Alpine choughs was flying along the slope, calling and playing with each other until they eventually disappeared above the mountain. At the next stop, we saw more than twenty Dalmatian pelicans below us on the lake centred around an island that might have been their roosting site or maybe even a breeding site.

We had lunch in a beautiful sweet chestnut forest with many large old trees. Soon we found a middle-spotted woodpecker that was actively defending its territory from another male. They put on a nice show chasing each other around us. Several Eurasian nuthatches, a short-toed treecreeper and Eurasian jays were also seen well. We found a nice group of Roman orchids that were somewhat hit by the snow and cold. We also heard a tawny owl calling from the distance, interesting to hear that during the day.

We then had coffee at a restaurant with great views of the coast of Ulcinj. As it was late we decided to turn around and drive the same road back looking for rock partridge. Rock bunting was added to the list as we saw a couple along the road with ciril buntings. We stopped at a good-looking place with plenty of rocks scattered on the steep hillside. We started playing the tape and soon there was a response. Some of us saw two birds flying towards us and landing in the bushes. They kept calling from inside, but we couldn't obtain any views. Then another rock partridge started calling from below us on the hillside. Again the terrain was very difficult and we could not find the calling bird until they eventually flew and some of us had a glimpse. We tried another site along the road, but no luck this time. We drove back to the hotel and had dinner.

**Tuesday 8 April 2025**

**Day 4:**

Ulcinj Saltpans, Bojana River mouth

*Weather: Sunny, strong, cold wind*

We walk around Virpazar before breakfast again. This time we followed a path along the river. A little grebe family was seen with recently fledged chicks. Several moorhens were hiding in the dense vegetation, they

Find out more about [The Unknown Adriatic](#) trip or [contact us](#)

01962 302086 sales@wildlifeworldwide.com [www.wildlifeworldwide.com](http://www.wildlifeworldwide.com)

are rarely as showy here as in the UK. A sedge warbler was heard singing from the reeds and after some careful search, we had good views of the bird.

After breakfast, we drove along the coast to Secovlje Saltpans. Thanks to our contacts we were able to drive into the salt pans. A shallow pool in one of the abandoned pans had a big mixed flock of wood sandpipers and ruffs. In the dry part, several migrating Eastern black-eared and a single northern wheatear were seen. A zitting cisticola was singing behind us, alpine swifts and a single common swift flew past. We drove to the pump house and scanned the nearby pond. There were a few black-winged stilts, greenshanks, common and spotted redshanks found. We could see the flamingos in the distance, so we started walking towards the big lake in the strong wind. Along the path, we found yet more wood sandpipers and two marsh sandpipers were a welcome addition to the list. Two pied avocets and a northern lapwing were good finds. Scanning the big lake we estimated the number of flamingos to be around 700! There were common shelducks, black-necked grebes and several flocks of northern shovelers on the lake too. A big flock of yellow wagtails landed in the vegetation next to us providing great views of the nominate and feldeggi (black-headed) race. Then a large bird was spotted flying in, a common crane, a rarely seen species here in April! It was followed by a Dalmatian pelican, but both birds disappeared on the horizon. On the walk back to the pump house a Eurasian spoonbill was spotted flying in. Fortunately, it landed not far from us and good views were had in the telescope.

While eating our sandwiches we saw a short-toed eagle flying and a hen harrier hunting above the dry ponds.

We then drove towards the coast stopping to scan the pastures along the road. Two whinchats and several hoopoes were seen in the fields and a flock of short-toed larks flew off. Crested larks were calling and we counted 13 northern wheatears around us. Two cattle egrets were picking up insects around the grazing cows.

We reached the coast at the Bojana River mouth. Gulls were roosting on the sand and carefully scanning the yellow-legged gulls we found an adult lesser black-backed gull of the fuscus race and several Mediterranean gulls. Good numbers of sandwich terns were flying above the sea joined by little gulls, little terns and a single Caspian tern. Kentish plovers and sanderling were also found.

We drove around the salt pans on the way back exploring the area. We found more cattle egrets and some Spanish sparrows. A roadside stop was very productive for orchids, we found four species (pink butterfly, loose-flowered, tongue orchid and long-lipped serapias).

**Wednesday 9 April 2025**

### **Day 5:**

Boat tour on Lake Skadar, day trip into Albania

*Weather: Sunny, gentle breeze, warming up slightly*

We had a boat tour on Lake Skadarsko before breakfast starting at 7 am. It was chilly but fortunately less windy than in the previous days. There were many great crested grebes, pygmy cormorants and a few black-necked grebes seen as we were driving towards the western part of the lake which has more floating vegetation and reedbeds. We were happy to find a ferruginous duck, a bird not usually seen during the boat tour. A flock of black-crowned night herons was roosting in the willow trees. Whiskered terns were flying around us, such beautiful birds in breeding plumage. Great reed warblers were singing in the reeds and a single Dalmatian pelican was fishing. It then flew off fortunately coming towards us offering great views.

After breakfast, we started the drive towards Albania following the same road as the day before. Border control was very quick and we were on the road towards Shkoder along the Buna River (called Bojana in Montenegro). A hen harrier was a surprise hunter next to the road. We stopped at a small wetland and had a short walk. Wood sandpipers and ruffs were seen in the shallow water. A collared pratincole was hunting above the marsh and a glossy ibis flew in. Crested lark, migrating eastern black-eared and northern

Find out more about [The Unknown Adriatic](#) trip or [contact us](#)

01962 302086 sales@wildlifeworldwide.com [www.wildlifeworldwide.com](http://www.wildlifeworldwide.com)

wheatears, a woodchat shrike, alpine swift and red-rumped swallow were also found.

We then drove to the coast to a restaurant with good views over the lagoon and the sea. While having coffee and hot chocolate we were enjoying a big flock of roosting sandwich terns. A slender-billed gull also landed next to them showing off its pinkish breast plumage and the long, slender bill. Three Eurasian oystercatchers, two grey plovers and a whimbrel were feeding on the shore of the lagoon. In the distance, a flock of red-breasted mergansers was diving.

On the way back we stopped for a big mixed flock of migrating Spanish sparrows and corn buntings. Then visited Mesi Bridge, a stone bridge from the Turkish era not far from Shkoder. Driving towards the main road we spotted two Syrian woodpeckers from the van. Unfortunately, they did not stay long for better views. We then crossed the border back into Montenegro. A few tree sparrows were the only avian highlights on the way back to the hotel.

**Thursday 10 April 2025**

**Day 6:**

Travelling day to Zabljak

*Weather: Cloudy, strong wind, snowing in the mountains*

After breakfast, we said goodbye to Hotel Pelikan and Lake Skadarsko and started driving towards the Durmitor Mountains. We had a short stop near the famous Ostrog Monastery built high up on a cliffside. We took photos from across the valley and then continued driving. We had to pass the town of Savnik before noon as a road-blocking demonstration was starting at midday.

We drove into Komarnica Valley, a scenic birding spot below Durmitor. We stopped at a small lake along the road as it usually has migrating birds. It indeed had two male garganeys, a purple heron and two little egrets. We stopped at the bridge above the spectacular Nevidio Canyon and saw grey wagtail, black redstart and hawfinch flying by. We then drove deeper into the valley taking photos of the scenic waterfall. At one of the stops, a green woodpecker was seen well. A wryneck was flushed from the roadside and it perched in a tree showing its beautiful cryptic plumage. Rock buntings were seen along the road and a marsh tit showed up in the trees.

Driving back to the main road we saw two short-toed eagles perched and then flying off. At the next stop, we had good views of mistle thrushes and water pipits. We drove onto the Zabljak Plateau dotted by small lakes and surrounded by the mountains of Durmitor National Park. In a field next to trees we found fieldfares and yellowhammers. The lakes on the plateau are stopover sites for migrating birds. In the strong wind, we found a northern lapwing, a northern shoveler and a purple heron on the lakes. A female hen harrier was hunting on the nearby fields and skylarks were singing. It started snowing and we drove to our next hotel in Zabljak.

**Friday 11 April 2025**

**Day 7:**

Zabljak area

*Weather: Sunny, very cold in the morning, strong wind*

It was sunny and cold in the early morning when we started walking into the forest before breakfast. Song thrushes were singing everywhere and we found a dunnoek, a scarce bird of mountain forests here. Coal tits were very vocal and we found some very obliging crested tits posing for the photographers. Willow tits were also around and soon we reached scenic Crno Jezero (Black Lake) offering amazing views of the peaks of Durmitor. As we started walking back a woodpecker was drumming next to the path. It was a beautiful male three-toed woodpecker giving prolonged good views drumming on a dead trunk. We returned very happily to the hotel for a good breakfast.

01962 302086 sales@wildlifeworldwide.com [www.wildlifeworldwide.com](http://www.wildlifeworldwide.com)

After breakfast, we explored the forests around Zabljak driving and stopping in the forest. We saw more crested tits, siskin, common crossbill, sparrowhawk, goldcrest and Eurasian bullfinch. There were some nice flowers along the road and we had spectacular views of Tara Canyon.

Early afternoon we drove back to Zabljak Plateau to check if more migrants arrived during the night. An immature pallid harrier was a good find hunting above the grasslands. There were now big flocks of wood sandpipers at the lakes along with two black-winged stilts. One of the lakes held wigeon, teal, garganey and shoveler. We explored some Medieval tombstones called stecci on a hill. Such sites are scattered around Bosnia, Montenegro and Southern Serbia. Many stones had interesting carvings.

Our last place to visit was a scenic road that goes across Durmitor. Snow was blocking the road before the pass as usual at this time of year. We stopped in a small parking area and started walking. Soon we heard rock partridge calling from below us. After a while, we managed to find them and had great views of the scope. A water pipit was singing on the mountainside, but there was little else showing. We drove back to the hotel going past the ski centre.

**Saturday 12 April 2025**

**Day 8:**

Travelling day back to Croatia

*Weather: Cloudy in the morning, sunny and warm closer to the coast*

Today was our last full day of the trip and a travelling day. We left after breakfast and decided to check into Komarnica Valley again. At the small lakes, we had eleven purple herons and a male goosander. A short walk finally resulted in seeing a sombre tit, a bird that is usually easily seen in Montenegro, but this year we struggled to find them until now.

Our next stop was at Niksic Reservoir where we saw big flocks of migrating great crested grebe. We had lunch above a small river and saw a short-toed eagle carrying a snake while eating our sandwiches. There were many butterflies around with eastern festoon, wall brown and Camberwell beauty.

A longer drive followed reaching the coast at Budva. Our destination was Tivat Saltpans, a stopover site for migrating waders and songbirds. We walked around the pans and found wood sandpipers, little ringed plovers, black-winged stilt and common greenshank, a squacco heron was finally found. They arrived later this year due to the unseasonably cold weather. A very obliging black-headed yellow wagtail was posing for us and a more distant woodchat shrike was found. In the bay, a shag and pygmy cormorants were perched on the rocks.

Time was pressing so we continued and took the ferry across Kotor Bay. The border crossing into Croatia was slower this time due to the weekend traffic. We arrived at Mlini on time before dinner.

**Sunday 13 April 2025**

**Day 9:**

Drive to the airport

*Weather: Sunny, but windy*

We had an earlier breakfast as some group members were leaving early for the airport. After breakfast, some of us had a short walk next to the hotel seeing Sardinian and eastern subalpine warbler, blue rock thrush and hoopoe. In the bay below us, a flock of migrating garganeys was flying and a distant black-throated diver was spotted. Then it was time to drive to the airport. Outside the airport building in the little park, a nice male pied flycatcher was the last bird of the trip.
