Poland – Butterflies & Moths of Southern Poland

14 – 22 July 2018

Zygaenatrifolli

Ariciaaegestis

Polyommatus bellargus

Lycaena virgaureae

Compiled by Andrzej Petryna

Tour Leader: Andrzej Petryna with 12 participants

Day 1: Arrive Krakow & transfer to Niepolomice Forest

Saturday 14 July 2018

Weather: Hot and humid with intermittent showers, 19 - 25 °C.

After arriving in Krakow, we left the airport and headed towards our first hotel near Niepolomice. We planned to stop at two places on the way to start our exploration of the Jurassic Hills around Krakow.

Our first stop was at a complex of wet meadows in a broad valley in the Jurassic Hills, with several butterfly host-plants including *sanquisorba officinalis*, *polygonum bistorta* or *viola palustris*. Although our walk was interrupted by showers, we found a lot of butterflies active in between, the most interesting being the violet copper, although we also saw small and Essex skipper, small pearl-bordered fritillary, marbled white and holly blue.

Our second visit - to some xerothermic, i.e. hot and dry, meadows in Krakow's Jurassic Rocks area - was curtailed by a thunderstorm, so we continued to our hotel and decided to visit it on the way back to the hotel next day.

After an enjoyable dinner of Polish cuisine, we discussed our plans for the next few days.

Day 2: Jurassic Hills

Sunday 15 July 2018

Weather: Hot and humid, full sunshine, 24 - 29 °C

After breakfast we headed to the Jurassic Hills, northwest of Krakow, stopping on the xerothermic outer slopes of one of Krakow's Jurassic valleys. The meadows, with their xerothermic flora including *thymus* sp., *coronilla* sp., *anthericum ramosum*, *salvia verticillata* and *pratensis* and *melampyrum arvense*, are the habitat for several butterflies, and we saw swallowtail, dingy skipper, dryad, meadow brown, large wall brown, wall brown, blue-spot hairstreak, scarce large blue, dusky large blue, holly blue and Meleager's blue here. We also spotted a wasp spider in the field.

After some hours spent here, we headed down to the inner part of the gorge, which has a small stream in the centre. After a picnic lunch here, we checked the vegetation along the stream in the open area of the gorge, where we saw several brimstone, large and small white, pale clouded yellow, comma, map butterfly, silver-washed fritillary, Queen of Spain fritillary and scarce copper.

The next place we visited was in the Jurassic Rocks near Krakow with both xerothermic and some wet meadows. Our walks brought us some new species of butterfly such as red admiral, small heath, brown argus, chalk-hill blue and brown hair-streak as well as two burnets: six-spot and slender Scotch.

We reached the hotel around dinner time. Although we had a moth light in our equipment, we decided to wait until the next hotel before using it, due to the lack of a green area and the crowds of people around our hotel this evening, as a wedding was taking place.

Day 3: Kielce Upland

Monday 16 July 2018

Weather: Warm and humid with short showers, 25 - 27 °C.

After breakfast we packed up and moved from the Krakow area towards the valley of the River Nida in the Kielce Upland, changing from bedrock of Jurassic limestone to crystallized gypsum, which forms long

Find out more about our [Butterflies & Moths of Southern Poland](#) trip or [contact us](#)

01962 302086 sales@wildlifeworldwide.com www.wildlifeworldwide.com

gypsum ribs throughout the area, covered with dry xerothermic meadows containing onobrychis sp., scabiosa sp., eryngium campestre, linum chirsutum, carlina onopordifolia and stipa sp.

Our first stop was at a hill formed from gypsum, several kilometres long. The meadow there contained onobrychis, so it was the right habitat to search for Ripart's anomalous blue. During our walk along the gypsum rib we encountered Ripart's anomalous, common, holly and Reverdin's blues, and swallowtail, together with some common species such as small heath, wall brown, meadow brown, peacock and marbled white. We also observed a smooth snake.

After a picnic lunch, we moved on to a meadow near the River Nida, to check this wetter habitat, which contained sanquisorba and polygono-num plants. Dingy skipper, small skipper, green-veined and Eastern bath white, pale clouded yellow, painted lady, red admiral, Queen of Spain fritillary, marbled white, sooty copper, little blue, short-tailed blue and six-spot burnet were all spotted here. Near the river we also spotted some dragonflies: broad-bodied chaser, white-legged and banded damselfly. After this we headed to our next hotel at Pińczów, situated in the old riverbed of the Nida, and surrounded by parkland. After dinner, we tried the moth lamp and, although the weather was not perfect, we found several moth and micro-moth species around the lamp, as well as hummingbird hawk moth.

Day 4: Kielce Upland

Tuesday 17 July 2018

Weather: Showers and sunny intervals, 18 - 26 °C.

Today we continued to explore the Kielce Upland, with our first stop at Polana Polichno nature reserve near Betlejem. Here there are some small forest glades with melampyrum nemorosum, adonis vernalis, scopolia carniolica and a set of spring orchids. In the sunshine after the morning rain, this very warm site appeared to be interesting not only for its butterflies, as right at the beginning we spotted a pair of honey buzzards and a raccoon dog. We also found praying mantis, striped bug and phaneroptera falcate - a very rare grasshopper - and several wasp spiders; we even watched a female being inseminated. Here we spotted swallowtail caterpillar, dingy and Essex skipper, silver-washed, Queen of Spain, violet and dark-green fritillary, scarce copper and the burnet zygaena ephialtes. We had our picnic lunch near a hill with a breeding colony of European bee-eaters flying around their nest holes - which provided a colourful spectacle at the end of our meal.

We continued to a chalk hill near Pińczów, but when we reached the site it started raining heavily, so after waiting in the van for a while we decided to return to the hotel (which was less than ten minutes drive away) for tea or coffee. After a 30 minute break the sunshine returned - so we went back to the hill with its xerothermic meadows around the top, where we encountered: little blue, brown argus, silver-studded blue, chalk-hill blue and adonis blue, and some new burnets: five-spot, transparent and zygaena carniolica.

Day 5: Pieniny Mountains

Wednesday 18 July 2018

Weather: Cloud and rain, 18 - 20 °C.

After breakfast we left the Kielce Upland and headed to our final hotel in Kacwin near the Slovakian border in the Pieniny Mountains, stopping for lunch at a restaurant en route. The only thing of any interest was birdwatching through the windows of our van – which was quite interesting, with glossy ibis, curlew, great white egret and common kestrel spotted in the Dunajec River. In the afternoon the rain wasn't so heavy, so I proposed a short walk to Slovakia.

It was still raining, so we didn't see many butterflies other than very common species such as common blue, or ringlet, however we saw black stork, Eurasian sparrowhawk and black redstart. We also came across some yellow-bellied toads on the Slovakian side of the border. After dinner with some regional

Find out more about our [Butterflies & Moths of Southern Poland](#) trip or [contact us](#)

01962 302086 sales@wildlifeworldwide.com www.wildlifeworldwide.com

dishes, we decided to try our moth light. The hotel yard had a barbecue place under a roof, so we were able to set the moth light despite the rain, which brought us several new species of moths and micro-moths.

Day 6: Tatra Mountains

Thursday 19 July 2018

*Weather: Cloud and rain until the afternoon, 18 - 20 °C.
(At the top of Kasprowy Wierch, in the Tatra Mountains, it was only 8 °C).*

Today was devoted to our trip to the Tatra Mountains. After some days of heavy rain in the mountains, the situation in the region was a little dangerous, with some villages and roads flooded. We had some difficulty getting to Zakopane as some roads were closed. We headed to the top of Kasprowy Wierch (1,998 metres) by cable car, but it was difficult to see anything due to the mist. It was raining at the top and visibility was very poor, so only a few of the group wanted to take a short walk in the mist to see if they could see anything. In fact, we were lucky enough to see Alpine accentor on the rocks.

Our itinerary included a walk in the valley of the Biały River in the Tatras, but due to the weather we decided to combine it with a visit to Orava Raised Bog on one of the following days. After a short stop at a local wooden church (in typical Zakopane architectural style from the beginning of the 20th century) at Jaszczurówka, we returned to the hotel hoping for better weather in the afternoon.

The weather soon improved, so we visited the fishponds near Biała River at Frydman, although we had some difficulty getting there along the flooded road. There, in light rain, we saw some dragonflies: common darter, common goldenring and blue-tailed damselfly, plus six-spot burnet. There were common and whiskered terns at the ponds, and we found our first orchid there - marsh helleborine.

Day 7: Szopczańska Valley

Friday 20 July 2018

Weather: Morning rain, sunny in the afternoon, temp. 18-25 °C

We enjoyed an early lunch in the hotel, while looking at the moths that were collected last night, before driving to the Szopczańska valley to look for Apollo butterflies. After the rapid change of weather from heavy rain to hot sunshine, we came across a good selection of butterflies, all of which were very active. We found five to eight Apollos, some of them within a very short distance, plus swallowtail, dingy skipper, pale clouded yellow, white admiral, comma, map butterfly (second generation), silver-washed and Queen of Spain fritillary, Scotch and large ringlet, arran brown, white-letter hairstreak, scarce and small copper, large, holly and Mazarine blue and brown hairstreak.

As it was still sunny, we decided to stop on the way back to our hotel and take a pleasant walk along a sunny forest road. We stopped near Łapsze Niżne at a meadow beside the forest, where we spotted white admiral, five-spot burnet, silver-washed fritillary and saw wolf scat on the road in the forest near the beaver dam. After dinner we continued our moth patrol, which added a couple of new species to our moth list.

Day 8: Tatra Mountains National Park

Saturday 21 July 2018

Weather: Hot and sunny, around 26 °C

Today we took a pre-breakfast walk, mostly for bird watching. Walking towards Slovakia, we spotted black stork, white stork, red-backed shrike, grey wagtail, black redstart and yellow-bellied toad.

After breakfast we drove into the Tatra Mountains to explore the huge raised peat-bogs near Czarny Dunajec, and look for the butterflies typical of this new habitat, which held cranberry, Labrador tea,

Find out more about our [Butterflies & Moths of Southern Poland](#) trip or [contact us](#)

01962 302086 sales@wildlifeworldwide.com www.wildlifeworldwide.com

sundew and bog bilberry plants. Unfortunately, much of the area was seriously flooded after the heavy rainfall in the mountains, but our visit proved very successful as we managed to spot swallowtail, small and silver-spotted skipper, moorland clouded yellow, purple and lesser purple emperor, poplar admiral, Camberwell beauty, painted lady, silver-washed and dark green, heath and cranberry fritillary, small and chestnut heath, scarce and small copper and holly blue.

We also managed to take the walk along the Biały Valley in the Tatras that we didn't do on Thursday due to the heavy rain - mainly to see orchids. There we spotted fragrant orchid, short-spurred fragrant orchid, dark-red helleborine and common twayblade. We tried to trap some moths in the evening, but the weather wasn't favourable, so the results were very poor.

Day 9: Fly back to the UK

Sunday 22 July 2018

Weather: Sunny, 20-24 °C

After a pre-breakfast walk - with similar results to yesterday - followed by a generous breakfast, we headed to Krakow airport, with a very exciting view of a lesser spotted eagle with a frog in its beak not far from the hotel. We reached the airport around two hours and 15 minutes before the scheduled departure of the flight back to the UK, and lo and behold our trip was over!
